

**FEDERAL COMMUNICATION COMMISSION ARRIVING  
AT ORANGE COUNTY COMMUNICATIONS CENTER**

*Robert Brooking, Burbank, California, making presentation to Commissioners*

**'C' Is For Cat— . . .**

*(Continued)*

kitchen of the Local Government family, panting friendly.

**PROBLEM:**

Will the families be able to repair the destruction? Will it be worthwhile? Is it desirable? Can they all live in one room and share honey from one pot? Can they rebuild alone? Will they get help from the administrative landlords?

**ACT TWO**

**"LIVE LONG, LANDLORDS"**

**VILLAIN:**

As in Act One.

**HERO:**

As in Act One.

**ACTION:**

The Bear has finished his snuffling through the various Service houses. He now stands in the middle of the market place, gaping and panting happily, smeared with honey and loaded with honey pots. It is now apparent the pots are of different sizes and contain varying amounts of honey. Now that the honey is in the open market each Service family begins jockeying for position to regain not only their own pot of honey but also as much as possible out of the other honey pots.

**PROBLEM:**

Is there any difference in the quality of the honey in the vari-

ous pots? Can it be justified that one pot be larger even though all the honey is contained can not be used every day? Are the users equal in financial competence to bid in the market? Are the users equal in political competence to influence the market? Are the users equally organized and efficient in the use of their abilities? Which among the competing service families will get the most help from their administrative landlords?

**REVIEWS by the Critics**

**N. Y. DIMES:**

The central problem of the first act seems vague. It is possible that the partitions will only be weakened and in such an obscure manner it will be years before the full effect is noted, thus defeating efforts to concentrate on the problem. Certainly the rebuilding effort is desirable but may not be worthwhile unless it can be shown the result will not interfere with the premise of maximum utilization of honey. Whether either course is attempted will in large measure depend on support or lack of support by the landlords. Review of the period of history covered by the tragedy shown this support has always been sadly lacking in the case of the Public Safety families.

**2-WAY RADIO  
Equipment USERS  
JK REPLACEMENT OVENS**

Octal base, 6 or 12 volt or 6-12 volt combination units. 75° or 85° C. Hold 1 or 2 HC-6/U crystals. New "snap-action" thermostats insure long life, dependable service. For additional information write attention Sales Department.

**JAMES KNIGHTS COMPANY**

Sandwich, Illinois  
Pioneer designers of crystals and crystal ovens  
for the communications industry.

**WASHINGTON TOAST:**

The real conflict in the tragedy seems to be concentrated around the qualities of the various pots of honey and as such introduces a very powerful, very subtle and very old problem. Difference of quality may be established in any field of investigation, the issue is the ability to maximize these differences. If these differences can be established, then the granting of various sizes of pots can be justified whether or not the honey is immediately used. In this area the Public Safety families, being poverty stricken and living by public accommodation, are at a terrific disadvantage. This introduces the pathos of the matter where a truth is so self evident but unknown to those who can make rectification.

**CHICAGO DRIPSPoon:**

The plot of the central problem is disappointingly distorted. Any citizen should agree that honey in the Public Safety pot has a more distinctly important flavor than that of honey in commercial pots. The real drama of the tragedy is centered in the political tempest, which does not always blow good,
